

Apache2 SSL Virtualhost SSL Konfiguration

Einleitung

In diesem Beitrag befindet sich eine Version des **Apache2 Virtualhost** für die SSL Verbindung.

Konfigurationsdatei

```
<VirtualHost *:80>
    ServerName FQDN
    ServerAdmin webmaster@localhost
    DocumentRoot /var/www/html
    <Directory />
        Options FollowSymLinks
        AllowOverride None
    </Directory>
    ErrorLog /error.log
    LogLevel warn
    CustomLog /access.log combined
    ServerSignature On
</VirtualHost>

<VirtualHost *:443>
    ServerName FQDN
    ServerAdmin webmaster@localhost
    DocumentRoot /var/www/html

    <Directory />
        Options FollowSymLinks
        AllowOverride None
    </Directory>
    ErrorLog /error.log
    LogLevel warn
    CustomLog /access.log combined
```

ServerSignature On

SSLEngine on

SSLCertificateFile /cert/cert.crt

SSLCertificateKeyFile /cert/cert.key

</VirtualHost>
